Transonic® Flowmeters
Versatile Systems to Optimize Flow

Choose the Flowmeter That Best Fits Your Needs

Establishing adequate blood flow is a prime objective of any cardiovascular procedure. But without definitive measurements, one really doesn’t know exact flow. Transonic’s Flowmeters give you this information.

Moreover, you can choose the flowmeter that best fits your needs. They include:

- **Single-channel** Optima Flowmeters (key-activated or non key-activated)
- **Dual-channel** Optima Flowmeters (key-activated or non key-activated)
- An Optima Flowmeter integrated into the state-of-the art Aureflo
Flow-Assisted Surgery to Optimize Outcomes

Optima Flowmeters®
Transonic Optima® Flowmeters provide immediate, quantitative flow measurements to ensure vessel and graft patency with unsurpassed accuracy and resolution.

The Optima Flowmeter complements a full line of Perivascular Flowprobes for vessels from 0.5 mm to 36 mm in diameter and our Tubing Flow sensors for tubing with 1/8 to 1 1/4 inch outer diameters.

Key-activated and Keyless Systems
- Key-activated HT354 single-channel and HT364 dual-channel Flowmeters for US and Canada placement. An Optima Key is required for each use.

The AureFlo®
AureFlo® display of recorded LIMA-LAD volume flow waveform (systolic flow volume in red; diastolic in blue). Also displayed are mean flow in mL/min, pulsatility index (PI), D/S Ratio, ECG tracing and heart rate.

Case Portfolios: Record, Display, Create
- Recordings and snapshots can be labeled for identification before and after the procedure
- Select 8-second snapshots from recorded measurements for review or documentation
- Generous memory space allows storage of many cases

Versatile Display
- Touch-screen PC uploaded with FlowTrace® software
- Easy to read, high contrast display
- Display can be connected to an OR monitor

Intuitive Operation
- Quick and easy data entry
- Measure, capture, store and retrieve flow information

Archive & Retrieve
- Enhance operative notes and referral feedback
- Review case recordings remotely
- Print selected waveforms for reference, analyzing, teaching or documenting into the patient record

Convenient & Portable
- Small footprint, easy mobility
- Stable cart that securely holds Flowmeter, Monitor & printer
- Convenient writing surface and storage drawer

Why rely on guesswork and intuition, and wait until postoperative conditions determine surgical success? Make intraoperative flow measurements with a Transonic Flowmeter part of your routine to verify establishment of adequate blood flow before closing your patient.

Portfolio screen can display up to four snapshots at a time.
Transonic®: The Flow Pioneer

Transonic, the recognized leader in clinical and research blood Flowmeters, is rooted in university research. The company was founded in 1983 by its current President Cornelis Drost and fellow collaborators at Cornell University’s College of Veterinary Medicine to commercialize the transit-time ultrasound flowmetry devices pioneered by the group.

From its initial animal research market niche, Transonic evolved into the market leader for innovative medical flow measurement instrumentation. Examples include:

- Transonic’s transit-time non-constrictive Perivascular Flowprobes, now the intraoperative quality assurance standard for beating-heart coronary bypass surgery.
- Its intraoperative bayonet-style Flowprobes help avert intraoperative stroke encountered during aneurysm clipping procedures, EC/IC bypass and other cerebrovascular procedures.
- Transonic’s Clamp-on Tubing Sensors are an integral component of ventricular assist devices, organ preservation units, ECMO and cardiopulmonary bypass circuits.

“Accurate flow measurements can be of great assistance during vascular reconstructive surgery. The primary aim with these intraoperative measurements is to obtain information on the immediate result of the reconstruction, where a technical failure may jeopardize an otherwise successful operation.”

A Lundell, MD, FACS

“Not a day goes by that these flow measurements don’t solve a problem for me.”

B. Mindich, MD

“...at the Medical Center here, we use the flowprobe as part of our routine monitoring the post-bypass patient. It gives us intraoperatively information about what’s transpiring with each individual graft. It’s not information that you could get any other way.”

E. Grossi, MD

“Transonic Flow-QC® provides a measurable improvement in the quality of care you can extend to your patients. You can: improve patient outcomes; reduce or delay the need for future interventions and document surgical results.”

T. Wolvos, MD, FACS

Transonic Systems Inc. is a global manufacturer of innovative biomedical measurement equipment. Founded in 1983, Transonic sells “gold standard” transit-time ultrasound flowmeters and monitors for surgical, hemodialysis, pediatric critical care, perfusion, interventional radiology and research applications. In addition, Transonic provides pressure and pressure volume systems, laser Doppler flowmeters and telemetry systems.
